

What are special waste containers - solid materials?

Special Waste Containers - Solid Materials. Our range of special waste containers is designed for the safe handling and disposal of various hazardous materials. Safeguard your operations and fuel supply from theft, even in remote areas, with our advanced mobile fueling solutions.

What are hazardous waste containers?

Hazardous waste containers are most commonly composed of metal, plastic, or glass, so it's important to acknowledge various characteristics of the waste material when deciding which container to use. Common characteristics to consider include: Based on the material properties, you can determine which types of containers will and will not work well.

How do I choose a container for hazardous waste?

Selecting the proper container to store and transport hazardous waste is the crux of waste management and requires you to understand many factors, including the toxicity of hazardous waste, how each type of waste should be handled, and the federal compliance required.

What are approved hazardous waste containers?

Approved hazardous waste containers are constructed of different materials for different types of hazardous waste, such as steel, aluminum, fiberboard, plastic, and so forth, but they must be coded and numbered and lettered per DOT guidelines. Even more important than the size of the container is what that container is made of.

Are UN-rated waste containers safe?

UN-rated containers are the safest way to ensure safe transportation and handling of both hazardous and non-hazardous wastes. It is important to note that waste containers come in a variety of materials, and some are incompatible with certain waste types. Using UN-rated containers helps in separating hazardous wastes from non-hazardous wastes.

Are hazardous waste containers compliant?

When it comes to hazardous waste containers, don't guess. Even if you think a container is sturdy and effective, it won't be compliant if it is not specifically approved and certified by the Department of Transportation (DOT) for that particular waste type. In such cases, you can be fined by the EPA for non-compliance.

Here the language - modified by the Generator Improvements Rule - is more expansive than the above terse statement applicable to hazardous waste containers in a central accumulation area. A container holding ...
