If it's 5+ years old, try replacing the size 2032 CMOS battery. Disconnect all external peripherals, With PC plugged in, but powered off, push PSU test button.

What does an orange light mean on a computer?

An orange light is an indicator that alerts you something is going wrong with your computer. Unlike a green light, which usually means everything is running smoothly, an orange light often signals that there is an issue that needs your attention. In many cases, the orange light indicates a problem with hardware components.

Why does my computer keep turning orange?

Power on the computer to see if the orange light is still there. If the light disappears, the problem might be with one of the peripherals. Next, reconnect each device one by one, ensuring the cables are securely plugged in. Also, check for loose connections inside the case, such as SATA cables for storage drives.

What if I see an orange or yellow light on my Motherboard?

One of the first things I recommend doing when you see an orange or yellow light on your motherboard is to consult the motherboard manual. Each motherboard is different, and the manual provides specific information about what the various lights and indicators mean for your particular model.
