

Why should a laboratory waste container be used for broken glass?

A container for broken glass is essential for the safety of employees who work with hazardous materials and provides an appropriate storage and waste disposal option. Laboratory waste containers will prevent the release of hazardous materials into the environment and are crucial for protecting ecosystems, groundwater, and air quality.

How should laboratory waste be collected?

Such waste should whenever possible be collected in containers made of the same material - glass, metal, plastic - as the original product container. Collection of laboratory waste is strictly regulated. Label the waste materials with this schedule to ensure proper waste collection in your lab every time.

Why are laboratory waste containers important?

Laboratory waste containers will prevent the release of hazardous materials into the environment and are crucial for protecting ecosystems, groundwater, and air quality. Biohazard floor and chemical waste bins are necessary for accidents or spillages, as they can help you respond effectively and minimize potential harm.

Is it illegal to add chemically contaminated solid waste to the trash?

It is against the law to add chemically contaminated solid waste to the general trash in the laboratory. Our Bench Top Solid Waste Container with lid is a convenient way to discard of contaminated solid wastes right where you work. Not carrying your contaminated items across a lab to a larger waste container means preventing cross contamination.

What is a solid waste container?

It has a small footprint and can easily sit in the corner of a fume hood or bench, and is made of chemically resistant HDPE with a detachable base. Each Solid Waste Container comes with a single sample liner bag. Additional can liners are sold separately in packs of 100 or 250, red or yellow or biohazard bags.

What is a benchtop solid waste container?

The latching lid reduces solvent emissions from the waste inside, keeping the air you breathe safer and healthier. Our Benchtop Solid Waste Container with detachable base and lid with gasket is an ideal containment system for contaminated solid wastes, preventing possible cross contamination of products.
