

What is a solid waste container?

Solid waste does not necessarily mean solid material, but rather anything that can be discarded without causing harm to human health and the environment. The following containers are typically used to haul non-toxic waste, such as garbage, debris, scrap, ocean/lake water and recyclable materials.

Where can I find garbage cans and bins?

You can find garbage cans and bins in our dedicated section of Waste Containers at Busch Systems. We offer indoor & outdoor waste containers for restaurants, offices, & industrial business spaces.

What types of containers are used to haul non-toxic waste?

The following containers are typically used to haul non-toxic waste, such as garbage, debris, scrap, ocean/lake water and recyclable materials. Rectangular containers can be found in different sizes and grades to best fit the hauler's needs.

What is a waste collection system?

A waste collection system is a method of transporting waste containers to a transfer station, material recovery facility, or disposal site for direct discharge. This system is commonly used in areas with large waste containers and high waste generation rates.

How to select a waste collection container?

When choosing a waste collection container, consider the following factors: Size and weight - it should be of appropriate size to avoid occupational health hazards and should not weigh more than 20 kg. Additionally, the containers should be low cost and economical to minimize collection costs.

What are the types of waste containers?

Types of Waste Containers Heavy industries such as construction and oil and gas produce large amounts of solid, liquid and gaseous waste, which could be hazardous. Demolition jobs and agricultural activities on the other hand produce non-hazardous waste. Choose the containers from the list below based on the application. Roll-off containers/boxes.
