

What is a solid waste container?

It has a small footprint and can easily sit in the corner of a fume hood or bench, and is made of chemically resistant HDPE with a detachable base. Each Solid Waste Container comes with a single sample liner bag. Additional can liners are sold separately in packs of 100 or 250, red or yellow or biohazard bags.

What are the types of waste containers?

Types of Waste Containers Heavy industries such as construction and oil and gas produce large amounts of solid, liquid and gaseous waste, which could be hazardous. Demolition jobs and agricultural activities on the other hand produce non-hazardous waste. Choose the containers from the list below based on the application. Roll-off containers/boxes.

What types of containers are used to haul non-toxic waste?

The following containers are typically used to haul non-toxic waste, such as garbage, debris, scrap, ocean/lake water and recyclable materials. Rectangular containers can be found in different sizes and grades to best fit the hauler's needs.

What are these containers used for?

These containers are used for special type of wastes (i.e.) when the wastes need separate treatment and processing. Hauled/movable containers: These types of containers are fixed with wheels to facilitate its movement to waste processing site, transfer station or directly to the disposal site.

What should a solid waste container look like?

Containers should not have rough or sharp edges, and preferably have a handle and a wheel to facilitate mobility. They should be covered to prevent rainwater from entering (which increases the weight and rate of decomposition of organic materials) into the solid wastes.

What is a benchtop solid waste container?

The latching lid reduces solvent emissions from the waste inside, keeping the air you breathe safer and healthier. Our Benchtop Solid Waste Container with detachable base and lid with gasket is an ideal containment system for contaminated solid wastes, preventing possible cross contamination of products.
