

Why does SRP rely on traditional energy sources?

Two of SRP's largest renewable resources - solar and wind power - are variable, meaning they fluctuate. When the sun doesn't shine or the wind doesn't blow, SRP must rely on traditional energy sources and batteries to meet demand. This blend of renewable and traditional energy sources ensures a reliable power supply for our customers.

How does SRP work?

For customers who generate most of their own energy. Any excess energy you generate will be instantly exported by SRP and credited to your bill at a fixed price of 2.81 cents per kilowatt-hour (kWh). It's advantageous for these customers to shift their energy use to the middle of the day, when their system is generating the most energy.

What is SRP doing to make solar energy more sustainable?

SRP is committed to a more sustainable future and is developing renewable resources, including utility-scale solar projects. As part of this goal, SRP is developing over 1,500 megawatts (MW) of additional large-scale solar assets. Once online, these assets will push SRP's total solar energy to more than 2,025 MW -- enough to power 450,000 average-size homes.

Does SRP have a solar battery project?

SRP recently contracted for the output from the Sonoran Energy Center, which will be the largest solar-charged battery project in the state.

How many solar plants does SRP have?

This solar capacity includes SRP's three plants, which are part of its sustainable energy offering (300 MW) and two solar-plus-battery projects (348 MW) as well as the three solar plants the company announced this summer to support Facebook's new data center in Mesa, Ariz., and SRP's small-business customers (500 MW).

Does SRP offer community solar?

SRP is examining programs to allocate the new solar capacity to various customer groups, including community solar for residential customers.

SRP ENERGY STAR homes; Audit your home for energy savings; Electric vehicle (EV) benefits & savings; Community offers & events; Find a participating contractor; Solar options. ... SRP ...

New sources of renewable energy, like solar and wind, are joining SRP's portfolio of power generation. The integrated grid will balance the renewable sources of energy with more ...

Two of SRP's largest renewable resources - solar and wind power - are variable, meaning they fluctuate. When the sun doesn't shine or the wind doesn't blow, SRP must rely on traditional energy sources and

batteries to ...

Demand is the amount of power your home uses at any given point in time, measured in kilowatts (kW). Although related, energy measures how much power you use over a given period of time, measured in kilowatt-hours (kWh). SRP's ...

SRP's plan prepares to add 7,000 megawatts (MW) of new renewable resources, which includes 6,000 MW of new, large-scale solar resources by 2035. This is enough solar energy to power more than 1.3 ...

SRP currently has 648MW of utility-scale solar plants online or contracted and under development across the state and will add more than 1,375MW of newly contracted solar power by 2025. As ...

Including the power from CO Bar Solar, SRP is now at 1,548 MW of contracted energy toward its decarbonization goal of adding 2,025 MW of utility-scale solar by 2025, Petrey says. The...

As part of our goal, SRP is developing over 1,500 megawatts (MW) of additional large-scale solar. Once online, these assets will push our total solar energy to more than 2,025 MW -- enough to power 450,000 average-size homes. SRP ...

Learn how to go solar with Salt River Project, one of Arizona's largest utility companies, in 2025. Compare the pros and cons of different solar billing plans, incentives, and installation costs.

Salt River Project has delivered low-cost, reliable power and water to Arizona for over 100 years. View plans, see outages, pay your bill, contact us and more.

Contractors participating in SRP solar energy can use this page to find details, updates and information about the program. ESPA&#209;OL. disponible &#250;nicamente en ingl&#233;s. Menu. Search. ...

SRP offers four new price plans for customers who generate some of their own energy with rooftop solar or other distributed generation technologies...

SRP (Salt River Project) has taken strides to foster a solar-friendly environment for its customers. This guide delves into SRP's solar offerings, policies, and how SunPower by Nova can be a viable choice for those looking ...

Salt River Project (SRP) offers affordable power across Arizona. Keep reading to learn about the four SRP solar rate plans and their benefits. Refer A Friend. Testimonials. University. Blog (800) 552-9970 ... The right ...

Energy charge - Energy is priced per kilowatt-hour (kWh) and your monthly energy charges are based on the amount of energy used at on- and off-peak times during your billing cycle. Off-peak times (when demand is

low) offer the ...

Solar energy: SRP's commitment to the future | SRP. SRP's solar energy program works hard to deliver sustainable power. Learn about our plan to cut carbon emissions and advance solar ...

SRP will install a second meter to monitor energy production from your solar electric system. Customers who sell excess energy back to SRP will fall under the SRP Buyback Service Rider ...

SRP is a community-based, not-for-profit public power utility and the largest electricity provider in the greater Phoenix metropolitan area, serving over 2 million customers. SRP provides water to about half of the Valley's residents, ...

MW of renewable solar energy to SRP's power grid to support the energy needs of Facebook's data center in Mesa, as well as SRP small business customers, will save hundreds of ...

Report a power emergency. Call (602) 236-8811 (602) 236-8811. Power emergencies include electric shock, fallen power lines, arcing, explosions or damage to SRP facilities. In case of a ...
