

Does Sun Chips use solar power?

While the "sun" in Sun Chips didn't originally have anything to do with solar power, in 2008, the company began using solar power at its manufacturing facility in California and now uses renewable electricity for its U.S. direct operations.

Why are Sun Chips called Sun Chips?

The name Sun Chips was chosen to emphasize the brand's perceived healthiness and wholesomeness. From their earliest days, Sun Chips have touted their whole-grain status and featured radiant scenes in ads and on bags. The sun in the name did not originally refer to solar power.

What are Sun Chips made from?

Sun Chips are made from whole grains. They are fried, not baked, and have slightly more fiber than regular chips.

Are SunChips putting on solar eclipse glasses for April 8?

SunChips, the wavy, multigrain chips brand from the snack overlords of Frito-Lay, are putting on their solar eclipse glasses for April 8, and offering free bags of a special eclipse-themed flavor during totality, the span of time when the moon completely blocks the sun.

Will SunChips be available during the solar eclipse?

SunChips is releasing a special solar eclipse-themed flavor during the April 8 solar eclipse, but the chips will only be available while totality passes through the United States.

Is Sun Chips going green?

Sun Chips is still experimenting with ways to go greener. According to the USDA, the company is developing a better PLA-based bag. Although Sun Chips have been on shelves since 1991, they were in development for at least 10 years, according to The New York Times.
