

How many rooftop solar systems does TEP have?

TEP customers also have installed more than 29,000 rooftop solar systems with a combined capacity of about 300 MW. These renewable resources support the ambitious clean energy goals outlined in TEP's Integrated Resource Plan, which describes how TEP will serve customer energy needs over the next 15 years.

Does Tep produce electricity from renewable resources?

This month, TEP will also start delivering power from its new 250-MW Oso Grande Wind project in New Mexico. With the addition of the two systems, TEP has the ability to produce nearly 26 percent of its power from renewable resources.

When does Tep charge a battery?

On most days, TEP will charge the battery in the morning and early afternoon when solar resources are most productive, then deliver stored energy during peak usage periods. The WEC will produce enough energy over the course of a year to serve the annual electric needs of about 26,000 homes.

Where can I find information about Tep & UNS Energy?

For more information, visit tep.com. TEP and its parent company, UNS Energy, are subsidiaries of Fortis Inc. (NYSE: FTS), which owns utilities that serve more than 3 million customers across Canada and in the United States and the Caribbean. For more information, visit fortisinc.com.

What is a Solbank energy storage system?

SolBank, which was announced at RE+ in 2022, is a proprietary, containerized energy storage system that uses high-cycle lithium-ferro-phosphate (LFP) batteries with a 2.8 MWh energy capacity. LFP chemistry has been found to cut the risk of thermal runaway that can be a problem in other lithium-based battery systems.

How many customers does Tep serve?

TEP provides safe, reliable electric service to more than 433,000 customers in Southern Arizona. For more information, visit tep.com. TEP and its parent company, UNS Energy, are subsidiaries of Fortis Inc. (NYSE: FTS), which owns utilities that serve more than 3 million customers across Canada and in the United States and the Caribbean.

TEP has partnered with CleanPower Research to offer Solar Analysis, a service that helps you compare various solar options. Use this tool to review the benefits and approximate costs of private solar based on your ...

by the TEP system. Distribution System: The infrastructure constructed, maintained, and operated by TEP to deliver electric service at the distribution level to retail customers. ...

Tucson, Ariz. - Tucson Electric Power (TEP) and UniSource Energy Services are seeking new generation

facilities, energy storage systems and other resources such as energy ...

Winchester Solar, located in Cochise County, will include an 80-MW solar and 80-MW battery energy storage system. The system will produce enough energy each year to ...

: Tucson Electric Power announced on May 3 that its new solar generating facility with battery energy storage had gone live at its new Wilmot Energy Center. This includes a ...

Tucson, Ariz. - Tucson Electric Power (TEP) will build a second large battery system in southeast Tucson to store solar and other energy until later in the day to satisfy ...

The TEP stated the system will charge during the productive morning and afternoon solar periods as well as deliver stored energy during peak demand, bringing low-cost solar energy to customers ...

Partnership supports utility's ambitious renewable energy and reliability goals . PHOENIX, Nov. 14, 2023 -- DEPCOM Power (DEPCOM), an integrated provider of engineering, procurement, and construction (EPC) as ...

Not far from the Winchester site near Willcox, TEP already buys energy from the Red Horse Solar and wind project, which was built and is owned by Torch Energy. The 51-MW solar array and 30MW wind ...

Tucson Electric Power (TEP) has announced its second battery energy storage system (BESS) in southeast Tucson in the US state of Arizona to store solar renewable ...

Use TEP's Solar Analysis tool to estimate your payback period or follow these steps: Calculate your system cost after any federal and state tax credits. Check with a tax professional to verify if you are eligible for these ...

A 30-megawatt battery energy storage facility can be seen with solar panels in the background at the Wilmot Energy Center on South Swan Road. David Sanders, Tucson Electric Power

The new Wilmot Energy Center (WEC), located on 1130 acres southeast of Tucson International Airport, includes a 100-MW solar array and 30-MW battery energy storage system -- each the largest of its kind on TEP's ...

Tucson Electric Power is delivering more clean energy than ever before with a new 100-megawatt solar array and 30-MW battery energy storage system.

Wilmot Energy Center II will include a 100-megawatt solar array and a 100 MW, four-hour lithium-ion battery energy storage system. The additions will double the generating ...

A new solar plus storage system planned for Cochise County will help Tucson Electric Power (TEP) provide more clean energy when our customers need it most. ... TEP's ...

TUCSON, Ariz., August 14, 2024--(BUSINESS WIRE)--Tucson Electric Power (TEP) will build a second large battery system in southeast Tucson to store solar and other energy until later in ...

Besides the energy-storage pilot, TEP won approval to expand its GoSolar Home community-based solar program, which allows customers to buy power from a dedicated 5 ...

Wilmot Energy Center II will include a 100 megawatt (MW) solar array and a 100 MW, four-hour lithium-ion battery energy storage system. The additions will double the ...

We project that peak energy demand will increase from 2,382 MW in 2024 to 2,800 MW in 2038, or more than 1 percent each year. This increase accounts for both economic growth and the increased use of electric vehicles, ...
