What is thermal energy storage (TES) in solar energy field?

Usage of renewable and clean solar energy is expanding at a rapid pace. Applications of thermal energy storage (TES) facility in solar energy field enable dispatchability in generation of electricity and home space heating requirements. It helps mitigate the intermittence issue with an energy source like solar energy.

What are the properties of solar thermal energy storage materials?

2. The properties of solar thermal energy storage materials Applications like house space heating require low temperature TES below 50 °C, while applications like electrical power generation require high temperature TES systems above 175 °C .

Why is thermal energy storage important?

Solar energy increases its popularity in many fields, from buildings, food productions to power plants and other industries, due to the clean and renewable properties. To eliminate its intermittence feature, thermal energy storage is vital for efficient and stable operation of solar energy utilization systems.

What are the advantages of solar energy storage materials?

The better thermal conductivity, significant storage capacity, nonflammability, non-toxicity, and the lowest cost make these materials suitable for storing thermal energy in diverse solar applications such as solar power generation, solar cooking, desalination, and solar drying.

What is the temperature of steam storage in a solar power plant?

The steam storage temperatures in these plants are normally around 270 °C - 285 °C. In Jemalong Solar Thermal Station in Australia, liquid sodium at 560 °C is used as the storage material. Thermal oils have also been used in Dahan Power Plant in China and in many researches .

What materials can be used for solar energy storage?

In small-scale distributed solar power systems, such as solar-driven ORC systems [69, 73], low-temperature thermal energy storage materials can be used. For example, water, organic aliphatic compounds, inorganic hydrated-salt PCMs and thermal oils have been investigated for solar combined heat and power applications .
