

# Uv protection cover for outdoor electric car charging stations

Why use a port cover for electric car chargers?

In harsh outdoor environments, using port covers can help protect the charging port while the car is charging. Some covers are like large, thick mats with magnetic strips that attach to the hood and bumper of your car.

How do I choose the best EVSE Charger enclosure?

When choosing an enclosure for your EVSE charger, look for a NEMA rating suitable for outdoor use. The best outdoor EV charger enclosures are rated at NEMA 4. This rating offers protection against water ingress, making it ideal for outdoor use.

Why are car port covers recommended for front charging ports?

Car port covers are a good idea for those who have larger and more exposed charging port areas, especially those located at the front of the vehicle. The good news is that existing protections put in place by EVSE OEMs is more than sufficient in protecting it from rain and other water.

Should you buy an outdoor charging station rated at IP67?

Buying an outdoor charging station rated at IP67 offers a very high degree of protection. This means that for particulate and dust protection, the charger has 'full protection against dust and other particulates, including a vacuum seal, tested against continuous airflow.'

Do you need a charging port cover?

In cold environments, the opening where the charging port is can get jam packed with snow and ice. This is why some people consider using port covers as a way to put an enclosure around the opening while the car is charging up.

Are electric car charging connectors waterproof?

Electric car charging connectors are rigorously tested for waterproofing. Every part that could come into contact with water is tested, including being subjected to high-pressure spray from a fire hose, to ensure proper waterproofing.
