

What can you charge with a solar power bank?

A solar power bank can charge devices that can be charged via USB. Solar panels can typically still be used to charge power banks that don't have solar inputs, but you may need to get a third-party adapter to go from your panel to the USB.

Is the BioLite charge 100 Max a good power bank?

The BioLite Charge 100 Max is such a great power bank that it rivaled for our best overall spot. Its capacity-to-size ratio makes it ideal for packing a lot of power while backpacking, commuting, or flying. However, it lacks AC charging, which slightly reduces its versatility.

What is the typical capacity of small solar power banks?

The capacity of small solar power banks is usually rated via milliamp hours (mAh). Typically, you'll need around 3,500mAh to charge a phone once.

What is the best compact solar power bank?

The Sherpa 100AC from Goal Zero is our top pick for the best compact solar power bank. Weighing just 2 pounds and small enough to fit in a jacket pocket, it has an impressive capacity of 95Wh, which is enough to charge a laptop two times and a phone several times.

Are solar power banks necessary?

In our increasingly device-driven and extreme-weather world, solar power banks are just about essential. Just because you go out or the power goes down, does not mean systems have to go down.

How much power do you need in a power bank?

For most devices, you likely never need more than 1,000Wh in a power bank. Larger power banks and stations are rated in watt hours (Wh), and batteries larger than 1,000Wh are typically used to power appliances and other large electronics. Make sure your power bank has the necessary ports for your devices.
