

What are solar power buy-back rates?

Solar power buy-back rates in New Zealand are the price per unit at which energy retailers pay for excess/exported solar power from homes or businesses. The buy-back price ranges between 7¢ to 17¢ per kWh for exported solar power. Up to 40¢ is offered for exported stored battery capacity.

How do I find the best solar buy-back rate?

Finding the best solar buy-back rate is as easy as checking our list of what retailers are paying. And with a difference of 10c per kWh between the best and worst price, it literally pays to check before signing up. Powerswitch manager Paul Fuge said the buy-back rate had shot up over recent years, with some retailers paying a lot more than others.

What is the range of buy-back prices for exported solar power?

The buy-back price for exported solar power ranges between 7¢ to 17¢ per kWh. Solar power buy-back rates are the price per unit at which energy retailers pay for excess/exported solar power from homes or businesses.

Is a good solar buy-back price important?

A good solar buy-back price is important for homes that export a significant amount of their generated solar power. For instance, if a home uses 50% of its solar power and exports the other 50%, securing a good buy-back rate is crucial. However, if the home uses around 80% of the generated power, a good buy-back price becomes less important.

What is solar buyback & how does it work?

When your solar panels are producing more energy than is needed to power your home, they send the excess power back to the grid - and you get paid the best market rate for that power. This is what's known as solar buyback.

What is the buy-back rate for unused electricity?

Also known as a buy-back rate, it's usually a set rate per kilowatt hour paid as a credit on your bills. A feed-in tariff (FiT) is a credit you can receive for any unused electricity sent back to the grid.
