Where did solar energy come from?

The story of solar energy begins with our ancestors. The early uses of solar energy were primarily passive, relying on the sun's heat for warmth and drying. Ancient civilizations had a deep understanding of the sun's power and harnessed it in their daily lives. The Greeks, for instance, were known for their solar architecture.

When was solar energy invented?

The use of solar energy dates back to ancient civilizations, but it wasn't until the 19th and 20th centuries that it began to take shape into the form we recognize today--solar panels. This article delves into the history of solar energy, the individuals behind its invention, and the timeline of its commercialization and evolution.

What happened in the history of solar energy?

Here are some of the biggest events in the history of solar energy: In 1958, the Vanguard I satellite used a tiny one-watt panel to power its radios. Some of the earliest uses of solar technology were actually in outer space, where solar was used to power satellites.

How did early solar technology contribute to the development of solar energy?

Early solar technologies, such as burning mirrors and basic solar thermal systems, illustrated the potential of solar energy during the industrial age. They showcased the ingenuity of early scientists. These innovative methods effectively harnessed sunlight.

How did humans discover solar energy?

Humans recognized the sun's potential over 2,000 years ago, using magnifying glasses to start fires. This early innovation reflects our enduring relationship with solar energy. In 1883, Charles Fritts in New York City made the first solar cells from selenium with an extremely thin layer of gold.

What is solar energy?

Solar energy is a power supplied by the Sun, a ceaseless source of light and heat for our planet. It is the cleanest and most abundant renewable energy source available to us. Every day, the Sun showers the Earth with enough energy to exceed the world's total energy use far. But how do we capture and use this energy?
