

What to know about charging stations for electric cars

What is an electric car charging station?

That's where electric vehicle charging stations come in: also known as electric vehicle supply equipment (EVSE), these stations are specially designed to charge EVs at faster speeds than you can get from a standard wall outlet. **How Long Does It Take to Charge an Electric Car at a Charging Station?**

Where do most electric vehicles charge?

According to the Department of Energy, most plug-in owners charge at home over 80 percent of the time. For some, this could easily be 100 percent. Although public charging stations are becoming more common in urban areas, the vast majority of electric-vehicle charging in the U.S. actually happens at home.

Where can I charge my EV?

Many fuel retailers and service stations are starting to provide fast charging (also known as level 3 or DC charging). 29 percent of current EV drivers already charge their car there regularly.

Which fast-charging station will work with my car?

To find a compatible fast-charging station for your car, download the Chargeway app. It uses a color-coded number system to eliminate confusing names. Alternatively, you can identify the type of charging port your car has: CHAdeMO (DC fast charge) or SAE J1772 (AC level 2).

How much does it cost to charge an EV?

According to Bluedot.co, the average cost of charging an EV is around \$30-40. That's assuming the charging station charges around 40-70 cents per kilowatt-hour. But the exact amount will depend on the cost of electricity in your area and what type of charging station you use.

Are EV charging stations different?

Charging stations can also vary depending on the type of current they use (AC or DC), their power output, and their charging speed. It doesn't help that many EV charging terms are similar and often used interchangeably. For example, how fast is fast charging really? And what is rapid or even ultra-fast charging?
