# Where does solar power get its energy from

Where does solar energy come from?

Solar energy originates at the sun's core, where it is generated by nuclear fusion, a process by which two light atomic nuclei collide to form a heavier one while releasing energy. In this instance, a process known as a PP (proton-proton) chain reaction unfolds in which protons of hydrogen atoms aggressively collide.

#### What is solar power and how does it work?

Solar power is energy harnessed from the sunthat is transformed into different types of energy, including thermal and electricity. This is achieved through various technologies like photovoltaics, solar thermal energy, solar heating, and more, which convert heat and light into thermal or electric energy.

#### What is solar energy?

Solar energy is radiation from the Suncapable of producing heat, causing chemical reactions, or generating electricity. The total amount of solar energy incident on Earth is vastly in excess of the world's current and anticipated energy requirements.

How do solar panels turn sunlight into electricity?

There are several ways to turn sunlight into usable energy, but almost all solar energy today comes from "solar photovoltaics (PV)." Solar PV relies on a natural property of "semiconductor" materials like silicon, which can absorb the energy from sunlight and turn it into electric current.

What are some technologies used for solar power?

Solar power is energy harnessed from the sun that is transformed into different types of energy, including thermal and electricity. A bevy of innovative and evolving technologies, including photovoltaics, solar thermal energy, solar heating and moreare used to harness heat and light, which are converted into thermal or electric energy.

#### How is solar energy converted into usable energy?

Solar energy is converted into usable energy through various high-powered and yielding solar technologies. When it reaches Earth, sun radiation can be harnessed by directly converting it into electricity using Photovoltaic cells (PV) or by converting it into heat using solar power thermals.
