

Where would a solar power plant be most practical

How much land does it take to power a solar power plant?

Solar power facilities require a lot of land to be practical for utility companies -- that's part of why they are referred to as "farms." As a rule of thumb, it takes 2.5 acres-- about two football fields -- to generate a megawatt of electricity. That's enough to power a modest town of around 200 homes.

Where are solar farms usually developed?

Solar farms are usually developed in rural areas because of the amount of space that is required for them. They take up a lot of space. Solar farms are large-scale applications of active energy collection, most commonly through the installation of photovoltaic panels.

Can solar farms be installed in every country?

Virtually every country can benefit from the installation of solar farms. Although the far north and far south have extended periods of darkness where other energy resources would be required, the sun shines everywhere on our planet.

How big should a solar farm be?

Generally speaking, a solar farm will cover at least an acre, an area a little smaller than a football field. Some solar farms cover more than 100 acres. By contrast, a typical rooftop solar setup will cover maybe 1/20th of an acre. A solar farm in Kamuthi, India, might be the world's largest, covering just under four square miles. 1.

How can solar power be used?

Solar power can be used in a variety of different ways. Heat and light are the two main types of energy produced by the sun that humanity can harness for a number of different activities such as photosynthesis in plants to the heating of food and water via the creation of electricity with the use of photovoltaic cells.

Will a solar farm cost a lot?

A solar farm will not need fuel to operate and will have low maintenance costs. Once the plant is online day-to-day operation will be fairly cheap. But the high initial price tag will affect how utilities use solar power. Utility companies build power plants with an eye toward future demand.
