

What is wireless electric car charging?

Known as inductive charging, this wireless EV charging technology uses electromagnetic induction to charge batteries instead of conventional cabled solutions. There are two main types of wireless electric car charging either on the market or in development.

What are the different types of wireless electric car charging?

There are two main types of wireless electric car charging either on the market or in development. The first, static wireless charging, functions much like a wireless charging pad for a smartphone and works when a compatible electric car is parked on top.

Can a wireless charging track be installed on a parked car?

Research in wireless charging has usually focused on charging vehicles while parked, though some research has posited installing wireless chargers within roadways. Researchers from the Ulsan National Institute of Science and Technology (UNIST), led by Franklin Bien, are working on a wireless charging track system for electric vehicles.

What are wireless charging systems for EV?

Based on the application, Wireless charging systems for EV can be distinguished into two categories, 1. Static Wireless Charging As the name indicates, the vehicle gets charged when it remains static. So here we could simply park the EV at the parking spot or in garage which is incorporated with WCS.

What is static wireless EV charging?

The second type is static wireless charging, which is a term for the kind of charging that works when your car is parked. This technology is already a reality in limited applications, particularly when it comes to industrial and fleet electric vehicles, and it's close to becoming practical for at-home use, too. How does wireless EV charging work?

Is static wireless charging a viable option for electric cars?

Fast forward to today and it seems that static wireless charging for electric cars is getting closer to reality but still isn't a widespread commercially available option. According to Bloomberg, the technology is still too expensive to be viable for now - but trials in China, South Korea and the US are making headway.
