

How does the xtremepowerus solar pool sun heater work?

The XtremepowerUS 2' x 20' Inground & Aboveground Solar Pool Sun Heater works by allowing water to flow through the many tubes via your existing pool pump. It is then heated through the solar collectors before it returns to the pool. The system circulates the warm water whenever your pump is running.

What are XtremepowerUS panels?

XtremepowerUS Panels are built from extremely high-grade material that are proven to last in all types of weather. When your pool's pump and filter system circulates pool water through the SOLAR PANELS during heating, it is then returned to your pool. Once installed, these panels are cost effective, produce no greenhouse gases, and require low to no maintenance.

How does xtremepowerus work?

With the XtremepowerUS 2' x 20' Inground & Aboveground Solar Pool Sun Heater Panel water simply flows through the many tubes via your existing pool pump where it is heated through the solar collectors before it returns to the pool, then the system circulates the warm water whenever your pump is running. The system
